ASCE Sustainable Solutions Competition Rules

Competition Description:

The ASCE Sustainable Solutions Competition challenges students to develop a stronger understanding of sustainability and learn to incorporate sustainable solutions into everyday problems that engineers encounter. Students are encouraged to be creative in their solutions and use all available resources.

Eligible Students:

This year's competition is a simulated competitive grant application. Teams will emulate a municipality, transportation planning organization, special district, or other government public authority and propose real-life projects that they would like to see implemented using sustainable practices within their own communities. The fictional 2027 Sustainable Surface Mobility Grant program uses the Institute for Sustainable Infrastructure's Envision framework to serve as the basis to assess sustainability.

Only one team per ASCE Student Chapter may compete in the competition. Each team must designate a team captain. A student chapter may compete in only one ASCE student symposium per year. .
